

DigiChat possesses a feature set that goes beyond that of competing chat programs, making it the industry leading solution. By combining everything you've come to expect from previous versions of DigiChat, substantial enhancements to the core feature set, plus the addition of voice chat and video chat (web cam chat), DigiChat AV closes the door on competing technologies and surpasses the capabilities of all of today's popular IM products, such as AIM and ICQ.

Full support for one-to-one Voice Chat using VoIP

Finally, you can talk for as long as you wish to anyone across the street or across the globe without worrying about long distance phone charges - ever! DigiChat's totally new VoIP technology gives individuals, as well as, companies the power to enjoy clear voice chat conversations at a fraction (if any) of the cost of conventional telephony.

Full support for one-to-one Video Chat (requires WebCam)

Now you can truly connect with your friends and business associates like never before. The addition of video chat to DigiChat AV takes interaction to the most personal level by capturing tone, inflection and expression. This powerful capability works with virtually any Web cam and includes a variety of useful tools such as freeze frame, private messaging and file transfer.

Web-based Instant Messaging Support

DigiChat AV/IM can be installed directly on your desktop so you can experience faster launch times, locally saved profile settings with no need for a Web browser. Alternatively, you can also access DigiChat AV/IM features while you are on the go with our Web-based IM client. All you need is a browser.

Ensemble GUI with fully Skinnable Interface

Even though DigiChat comes with a killer Graphic User Interface (GUI), we recognize that you may want to have your DigiChat mesh with the rest of your Web site. Thus, we continue to offer you the ease and flexibility to develop and apply your own themes and skins to DigiChat so that your users will be immersed in your site's look and feel.

New Client-side Plug-in Architecture (extend and create new programs within DigiChat)

With the ability to expand the client-side functionality through your own custom plug-ins, your DigiChat chat room will be limited only by your imagination. Please note, that knowledge of Java programming is highly recommended.

Fully Scriptable BOTs Support

Your DigiChat site can take on a life of its own by providing the site administrator with the ability to program unique mini applications that enhance the user's experience, thus improving the overall online community. These BOTs can take a variety of forms and provide a great deal of additional functionality beyond that of the core product. Weather BOTs that report region-specific conditions to room users, or stock BOTs that delivery active trading info are just a few examples of existing BOTs. The BOT's capabilities are only limited by your creativity.

Commander API(Fully Scriptable Command Line and Java APIs)

DigiChat includes a very powerful integration, command/administration and reporting API. With both command-line and full Java-APIs, integrating DigiChat into your Web application is easy and seamless.

Enhancements to Moderated Auditorium Style Chat Event Support (Webcasts)

Undeniably one of the most requested features of previous DigiChat versions, the moderated functions have undergone substantial improvements and enhancements. These advancements ensure that your webcasts and chat events go off without a hitch and your guests and celebrities alike, will benefit from the most powerful moderated functionality available today.

5th Generation Messaging Engine for Rock Solid Reliability

DigiChat, now in its fifth generation, is an extremely robust, reliable and scalable high-performance chat platform. With thousands of site licenses sold to date, DigiChat is relied upon by some of the most popular online communities on the Net.

File Transfer Support

Share text documents, PDFs, images, sounds and even video directly through DigiChat. Simply choose the recipient in DigiChat, click the file transfer button and choose any file on your computer. Now you can truly collaborate as well as communicate.

Chatmaster-based Remote Administration (Application and Web-based options)

Our devotion to ultimate ease of use shines through again with a powerful Web-based administration application that permits Web administrators the ability to monitor activity, manage site resources and pull chat transcripts for quality control or session follow-up purposes. No matter where you are, the controls to your chat program are just a click away!

Membership/Authentication System Level Integration (Unified Logon)

DigiChat supports unified login from any membership or database system, whether custom developed or off the shelf. Common implementations include and support systems based upon PERL, PHP, Java (Servlet and JSP), ASP, and others.

Firewall and Proxy Friendly (HTTP Tunneling Support)

Your users need not be excluded from your online community simply because they are behind a corporate firewall or pass through a proxy server. DigiChat's HTTP tunneling ensures that these users have the same access and control as anyone else and the same seamless, stable connectivity that has made DigiChat legendary.

SSL Security

More than any other feature, chat privacy has taken on a key role in business and personal communications. DigiChat embraces this need and provides your users with trusted interaction via up to 128-bit strong encryption.

Tiered Roomed Structures (Support for unlimited categories and sub-categories of rooms)

Depending upon your specific application, you may have numerous chat rooms for different roles or discussions. Rather than a simple running list that may confuse your visitors or otherwise leave them searching for where they belong, DigiChat allows you to organize rooms in a logical directory structure. This permits you to establish parent categories and countless forums within them.

Chatwatch Text Chat Filtering

DigiChat supports the ability to replace any bit of text with another bit of text or a graphic. Chatmasters use this to automatically filter out undesirable words from their Java chat rooms.

Customizable Emoticon Set

Create and upload your own emoticons in order to further individualize your site. Add any number of additional emoticons or change the text codes needed to trigger an emoticon.

Integrated Spellchecker

A key and very desirable feature in any chat program, this tool ensures that you are not embarrassed by those inevitable typos.

Multi-tenant Virtual Chat Hosting Capabilities

For the Web administrator responsible for multiple chat venues, DigiChat permits you to establish chat services for an unlimited number of independent sites from a single server. This helps to significantly streamline administration and maintenance while making good economical sense by getting the most out of your system resources.

Configurable User and Administration Level Security Permissions

As with previous editions of DigiChat, you maintain control over the levels of authority that your basic users, moderators and ChatMasters enjoy. By setting specific permissions by user, you can establish a working hierarchy of users and subordinate admins that help complete your online community. Permissions are specific by function and can be tailored to each unique individual's role in operation of the site.

Real-time Communications Architecture

DigiChat AV/IM is a powerful instant messenger application that allows you to chat, share files, maintain buddy lists and more. This integrated system shows you the availability status of your buddies, whether they are Audio chat and Video chat enabled, plus gives you access to a host of tools and controls.

Scalable Architecture

Take advantage of our high-performance, scalable DigiChat text messaging engine. Ensuring guaranteed delivery of messages and support for TCP/IP (socket) and HTTP tunneling protocols, DigiChat's instant messaging engine is trusted by top Fortune 500 companies for their online community needs.

Guest Access Support

DigiChat AV/IM can be configured to allow guests into your corporate IM network. Perfect for letting a prospective customer into your network to speak with you or your team.

Chat Broadcast

Administrators can send systemwide broadcasts to every user in every room. This is useful when you need to get the word out to your employees that the sale has been extended or a sales meeting has been cancelled.
